No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              catalyses the conversion of D-glucuronic acid (GlcA) to L-iduronic acid (IdoA). To isolate the sequence, highly purified epimerase acid (IdoA). To isolate the sequence, highly purified epimerase from bovine liver was subjected to digestion with a lysine-specific protease. A DNA probe was generated from bovine liver cDNA by PCR using primers (see V62689-91) based on an isolated peptide (see using primers (see V62689-91) based on an isolated peptide (see w79270). This was used to screen a bovine ling lambda 9t10 library, w79270) generate was identified and sequenced. An additional library by PCR using an epimerase-specific primer (see V62692). The invention relates to isolated or recombinant DNA sequences for the invention relates to isolated or recombinant DNA sequences for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA sequence coding for mammalian glucuronyl C5-epimerase and functional derivatives - capable of converting D-glucuronic ac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This cDNA sequence includes a claimed coding region that encodes bovine glucuronyl C5-epimerase (see W79283), an enzyme that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        L-iduronic acid in the synthesis of heparin and heparan sulphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       transformed host cells are also claimed. The nucleic acid and vector can be used for the recombinant production of the enzyme. Glucuronyl C5-epimerase is useful for converting GlcA to IdoA in the biosynthesis of heparin and heparan sulphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a mammalian (including human) glucuronyl C5-epimerase or its amount of the functional derivative.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  method to determine the presence or absence of the common hereditary
C haemochromatosis (HFE) gene mutation in an individual comprising:
C (a) providing DNA or RNA from the Individual; and (b) assessing the
C DNA or RNA for the presence or absence of a haplotype or genotype where
C the presence or absence of the haplotype or genotype where
C presence of the HFE gene mutation in the genome of the individual. The
C HFE gene sequences from the present invention can be used to develop
C products for use in the diagnosis and treatment of HFE. The present
C invention also describes BTF genes, which are homologues of the milk
C protein butyrophilin (BT), and can be used in the production of agonists
C and antagonists of BT function. Also described are: (1) a RORET gene
C which can be used to develop products for the study, diagnosis and
C treatment of lupus and Sjogren's syndrome; and (2) NPT3 and NPT4 genes
C which are homologues of a type 1 sodium transport gene, and can
C similarly be used for hypophosphatemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

CC This sequence represents a human DNA marker clone used in the method of CC the invention. The method is for isolating a fragment of DNA containing CC an intermediate tandem repeat (ITR) sequence using hybridization CC election, and comprises: (a) providing several DNA fragments, at least CC one of which contains an ITR sequence, a region of the DNA fragment which CC contains at least one repeat unit consisting of a sequence of five, six CC or seven bases repeated in tandem at least two times; (b) providing a stationary support having at least one oligonucleotide associated with CC it, where the oligonucleotide includes a sequence of nucleotides which is CC complementary to a portion of the ITR sequence; and (c) combining the DNA fragments with the support under conditions where the DNA fragments CC including the DNA fragment containing the ITR sequence hybridize to the Support. The method is particularly used to isolate DNA containing CC pentanucleotide tandem repeat sequences as well as to detect target ITR CC DNA sequences having a low incidence of stutter artifacts (no more than CC 2.4%). The method is useful in DNA profiling for linkage analysis. CC criminal justice, paternity testing and other forensic and medical uses. CC containing is also useful for confirming the lineage of horses, dogs and other prize animals. The invention overcomes problems related to the use of microsatellite loci in DNA profiling. The method can detect polymorphisms with a low incidence of stutter artifacts, which has more in interpretarion allelic contents of loci many the content of loci many the problem in interpretarion allelic contents to find.

                                                                                                                                                                      the fusion protein as compared to the human protein only. The genes proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The
                                                                                                                                                                                                                                The invention relate to the isolation of genes C69084-C69119 encoding 27 human secreted proteins B37984-B38019. The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fc portion (C69075) for increasing the stability of

                                                       Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and

                                                x20248 to x20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Borrelia burgdorferi; spirochete; bacterium; pathogen; Lyme disease; epidemic relapsing fever; endemic relapsing fever; Lyme borreliosis; infection; diagnosis; characterisation; detection; ds.

constructs, recombinant varies and recombinant cells comprising the nucleic acids of the invention, recombinant production of the proteins, antibodies against the proteins, a method of identifying inhibitors of the proteins, and compositions comprising the inhibitors for cadministration to an animal. The nucleic acids, and the proteins they cancode may be used in the prevention, treatment and diagnosis of diseases cassociated with flea infestations. For example, the nucleic acids may be used to produce an HMT or HMC protein according to standard recombinant CDNA methodology by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The HMT and HMC nucleic acids may also be used as DNA probes in diagnostic assays (e.g., PCR) to detect and quantitate the presence of cat flea or other homologous nucleic acid continuous in samples. They may also be used to study the expression and continuous proteins may be used as antigens in the production of specific antibodies, and in assays to identify modulators (agonists and massays to identify modulators (agonists and massays to identify modulators (agonists and massays to identify modulators (agonists).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

The antibodies may also be used as diagnostic agents for detecting the presence of flea polypeptides in samples (e.g., by enzyme linked immunosorbent assay (ELISA)). The present sequence represents a cat flea HMT cDNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δô
                                                                                   construction of a novel expression vector. This vector contains a gene recombination having a strong expression-inducing promoter in the plasmid and induces high productivity of recombinant protein in a productivity transformant of a protein which is a G418 resistant cell recombined with a protein gene. This expression vector can produce high productivity transformant of a protein which is a G418 resistant cell recombined with a protein gene. This expression vector can produce high levels of the recombinant protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 11
                                  The nucleic acid is used in the production of bovine conglutinin, either the complete protein, or amino acid regions 1-351, 197-351 or 250-351. Oligomers based on the nucleic acid are used to modulate response. They are also useful as primers and probes for therapeutic or diagnostic use. Conglutinin, or its carbohydrate-binding fragments, are used to bind cells carrying the Clq receptor. Solid supports are used to remove compounds (especially proteins or peptides, e.g. immune complexes) having a carbohydrate component able of hound compounds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Glycine max
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20-JUL-1999 (first entry)
                                                                                                                                                                                                                                                                    The invention provides new DNA molecules (X60773-X60781) encoding soybean cytochrome P450 enzymes (Y09183-Y09191) respectively. The DNA encoding the cytochrome P450 enzymes is useful for transformation of Solanaceae the cytochrome P450 enzymes is useful for transformation of Solanaceae crop plants. Transgenic plants comprising DNA constructs having the P450 crop provided acid sequences are resistant to phenylurea herbicides. The transgenic plants have increased resistance to phenylurea herbicides compared to wild-type plants of the same species. The plant crops, e-9. turifyrass, tobacco, potato, tomato, corn, rice, cotton, soybean, rape, wheat, oats, barley or rice are particularly resistant to fluometuron, linuren.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-OCT-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel nucleic acid molecule (I) encoding an CC alternan sucrase (E.C. 2.4.1.140 - an enzyme, that belongs to the CR alternan sucrase (E.C. 2.4.1.140 - an enzyme, that belongs to the CR carbohydrates group) The recombinant, purified alternan sucrase CR gene is useful for the fermentative production of alternan (a CR carbohydrate) and/or fructose by secreting the enzyme into a CR carbohydrate) and/or fructose by secreting the enzyme into a CR contacted with a saccharose-containing solution. The alternan and/or CR criticise is then isolated from the medium. Cosmetic products or CR foodstuffs containing alternan can be produced. Recombinant production of foodstuffs containing alternan can be produced. Recombinant production of alternan sucrase is advantageous as it provides a cost effective means of a producing fructose for high fructose containing syrups, production of CR producing fructose for high fructose containing syrups, production of CR cathoh previously has been achieved by costly production from maize CR which previously has been achieved by costly production from maize can be protein isolated from clone AS-19B2 which is described in the

Alternatively, the enzyme is fructose is then isolated from the medium. Cosmetic products or alternan sucrase is then isolated from the medium. Cosmetic products or alternan sucrase is advantageous as it provides. Recombinant production of producing fructose for high fructose containing syrups, production of which previously has been achieved by costly production from maize starch. This sequence represents a Leuconostoc mesenteroides alternan sucrase in analysis a Leuconostoc mesenteroides alternan sucrase in production from maize starch.
